ELSEVIER

Comput. Methods Appl. Mech. Engrg. 144 (1997) 393–396

Computer methods in applied mechanics and engineering

Subject Index of Volume 144

Collocation method
Numerical approximation of elastic waves equations by implicit spectral methods, E. Zampieri and A. Tagliani 33– 50

Coupled problems
Standard staggered and staggered Newton schemes in thermo-hydro-mechanical problems, B.A. Schrefler, L. Simoni and E. Turska 93–109

Dynamics
Flutter of a cantilever rod with a relocatable lumped mass, H.P. Lee 23– 31
Space–time finite element methods for the sensitivity analysis of contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 371–389

Elasticity
Numerical approximation of elastic waves equations by implicit spectral methods, E. Zampieri and A. Tagliani 33– 50
Displacement control of prestressed structures, Z. You 51– 59
New formulation of FEM for deterministic and stochastic beams through generalization of Fuchs' approach, I. Elishakoff, Y.J. Ren and M. Shinozuka 235–243

Finite difference methods
Numerical approximation of elastic waves equations by implicit spectral methods, E. Zampieri and A. Tagliani 33– 50

Finite element and matrix methods
On the numerical treatment of finite deformations in elastovisciplasticity, G. Lührs, S. Hartmann and P. Haupt 1– 21
Numerical approximation of elastic waves equations by implicit spectral methods, E. Zampieri and A. Tagliani 33– 50
Displacement control of prestressed structures, Z. You 51– 59
Accurate thermal stress predictions using C^0-continuous higher-order shear deformable elements, B.P. Naganarayana, P.R. Mohan and G. Prathap 61– 75
A physically nonlinear dual mixed finite element formulation, J. Schröder, O. Klaas, E. Stein and C. Miehe 77– 92
Standard staggered and staggered Newton schemes in thermo-hydro-mechanical problems, B.A. Schrefler, L. Simoni and E. Turska 93–109
Stochastic finite element modelling in linear transient heat transfer, T.D. Hien and M. Kleiber 111–124
A kinematically exact finite element formulation of planar elastic-plastic frames, M. Saje, I. Planinc, G. Turk and B. Vratanar 125–151

Beam elements in instability problems, C. Pacoste and A. Eriksson 163–197
New formulation of FEM for deterministic and stochastic beams through generalization of Fuchs' approach, I. Elishakoff, Y.J. Ren and M. Shinozuka 235–243
A mixed element method in gradient plasticity for pressure dependent materials and modelling of strain localization, X. Li and S. Cescotto 287–305
A non-nested Galerkin multi-grid method for solving linear and nonlinear solid mechanics problems, Y.T. Feng, D. Perić and D.R.J. Owen 307–325
Space–time finite element methods for the sensitivity analysis of contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 371–389

Fluid mechanics
An improved dynamical approximation to Boussinesq equation using Karhunen–Loève basis, I.H. Tarman 153–162

Gas dynamics
A conservative fractional step method to solve non-isentropic Euler equations, T. Buffard and J.M. Hérard 199–225

General Rayleigh–Ritz and Galerkin techniques
An improved dynamical approximation to Boussinesq equation using Karhunen–Loève basis, I.H. Tarman 153–162

Heat and diffusion
Stochastic finite element modelling in linear transient heat transfer, T.D. Hien and M. Kleiber 111–124

Incompressible and near incompressible media
On the numerical treatment of finite deformations in elastovisciplasticity, G. Lührs, S. Hartmann and P. Haupt 1– 21

Nonlinear mechanics
On the numerical treatment of finite deformations in elastovisciplasticity, G. Lührs, S. Hartmann and P. Haupt 1– 21
Beam elements in instability problems, C. Pacoste and A. Eriksson 163–197
A mixed element method in gradient plasticity for pressure dependent materials and modelling of strain localization, X. Li and S. Cescotto 287–305
A non-nested Galerkin multi-grid method for solving linear and nonlinear solid mechanics problems, Y.T. Feng, D. Perić and D.R.J. Owen 307–325

Numerical solution procedures
On the numerical treatment of finite deformations in elastovisciplasticity, G. Lührs, S. Hartmann and P. Haupt 1– 21
Numerical approximation of elastic waves equations by implicit spectral methods, E. Zampieri and A. Tagliani 33– 50
Displacement control of prestressed structures, Z. You 51– 59
Standard staggered and staggered Newton schemes in thermo-hydro-mechanical problems, B.A. Schrefler, L. Simoni and E. Turska 93–109
A conservative fractional step method to solve non-isentropic Euler equations, T. Buffard and J.M. Hérard 199–225
A mixed element method in gradient plasticity for pressure dependent materials and modelling of strain localization, X. Li and S. Cescotto 287–305

A non-nested Galerkin multi-grid method for solving linear and nonlinear solid mechanics problems, Y.T. Feng, D. Perić and D.R.J. Owen 307–325
Local mesh refinement within a multi-block structured-grid scheme for general flows, W.L. Chen, F.S. Lien and M.A. Leschziner 327–369
Space–time finite element methods for the sensitivity analysis of contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 371–389

Optimization
A functional optimization formulation and implementation of an inverse natural convection problem, N. Zabaras and G.Z. Yang 245–274

Plasticity
On the numerical treatment of finite deformations in elastovisciplasticity, G. Lührs, S. Hartmann and P. Haupt 1– 21
A physically nonlinear dual mixed finite element formulation, J. Schröder, O. Klaas, E. Stein and C. Miehe 77– 92
A kinematically exact finite element formulation of planar elastic-plastic frames, M. Saje, I. Planinc, G. Turk and B. Vratanar 125–151
A mixed element method in gradient plasticity for pressure dependent materials and modelling of strain localization, X. Li and S. Cescotto 287–305

Solutions of ordinary and partial differential equations
Space–time finite element methods for the sensitivity analysis of contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 371–389

Stability in structural mechanics
Beam elements in instability problems, C. Pacoste and A. Eriksson 163–197

Stochastic processes
Stochastic finite element modelling in linear transient heat transfer, T.D. Hien and M. Kleiber 111–124
New formulation of FEM for deterministic and stochastic beams through generalization of Fuchs' approach, I. Elishakoff, Y.J. Ren and M. Shinozuka 235–243

Structural mechanics
Flutter of a cantilever rod with a relocatable lumped mass, H.P. Lee 23– 31
A physically nonlinear dual mixed finite element formulation, J. Schröder, O. Klaas, E. Stein and C. Miehe 77– 92
A kinematically exact finite element formulation of planar elastic-plastic frames, M. Saje, I. Planinc, G. Turk and B. Vratanar 125–151
Beam elements in instability problems, C. Pacoste and A. Eriksson 163–197
New formulation of FEM for deterministic and stochastic beams through generalization of Fuchs' approach, I. Elishakoff, Y.J. Ren and M. Shinozuka 235–243
A study concerning elastic analysis of disk centrifugal separators, C.I. Anghel 275–285
Space–time finite element methods for the sensitivity analysis of contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 371–389

Subsonic flow
A functional optimization formulation and implementation of an inverse natural convection problem, N. Zabaras and G.Z. Yang 245–274

Supersonic flow
A conservative fractional step method to solve non-isentropic Euler equations, T. Buffard and J.M. Hérard 199–225

Systems of linear and nonlinear simultaneous equations
Standard staggered and staggered Newton schemes in thermo-hydro-mechanical problems, B.A. Schrefler, L. Simoni and E. Turska 93–109
A non-nested Galerkin multi-grid method for solving linear and nonlinear solid mechanics problems, Y.T. Feng, D. Perić and D.R.J. Owen 307–325
Space–time finite element methods for the sensitivity analysis of contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 371–389

Thermal effects and thermodynamics
Displacement control of prestressed structures, Z. You 51– 59
Accurate thermal stress predictions using C^0-continuous higher-order shear deformable elements, B.P. Naganarayana, P.R. Mohan and G. Prathap 61– 75

Transport phenomena
A conservative fractional step method to solve non-isentropic Euler equations, T. Buffard and J.M. Hérard 199–225

Turbulence
An improved dynamical approximation to Boussinesq equation using Karhunen–Loève basis, I.H. Tarman 153–162
Local mesh refinement within a multi-block structured-grid scheme for general flows, W.L. Chen, F.S. Lien and M.A. Leschziner 327–369

Viscoelastic and viscoplastic media
On the numerical treatment of finite deformations in elastovisciplasticity, G. Lührs, S. Hartmann and P. Haupt 1– 21

Viscous flow
A functional optimization formulation and implementation of an inverse natural convection problem, N. Zabaras and G.Z. Yang 245–274
Local mesh refinement within a multi-block structured-grid scheme for general flows, W.L. Chen, F.S. Lien and M.A. Leschziner 327–369

Wave motion
Numerical approximation of elastic waves equations by implicit spectral methods, E. Zampieri and A. Tagliani 33– 50

Workhardening structures
On the numerical treatment of finite deformations in elastovisciplasticity, G. Lührs, S. Hartmann and P. Haupt 1– 21
